Co-Design process: cheat sheet

What kinds of questions are we looking to answer at each stage?

What changes have come already from our engagements / What capacities are being built / What barriers have we encountered What does this tell us about opportunities/enablers/direction and what is needed to achieve the outcome / What are we learning about the system What levers or approaches are likely to have the greatest impact now and in the future / What risks need to be managed What are the collective changes and outcomes we need to be aiming for / How might we measure those

MAKE & TEST

Testing new ideas and prototypes in principle and in practice

- How can we engage stakeholders and whānau in testing and evaluating concepts and solutions?
- What do we want to learn and how will we learn that?
- Who needs to be involved?
- What is and isn't working in the prototype? What needs changing?
- What are the outputs from the prototyping?What are we learning about the capacities
- and capabilities needed to embed change and how might we help build these?
- What biodegradable supports are needed to support change and implementation?
- What needs to come next? What might transition to BAU involve?
- How are we building whānau and
- organisational capacity through our engagements?
