Evaluation theory

Alkin's Evaluation Theory Tree (updated 2012)

'Praxis' framework

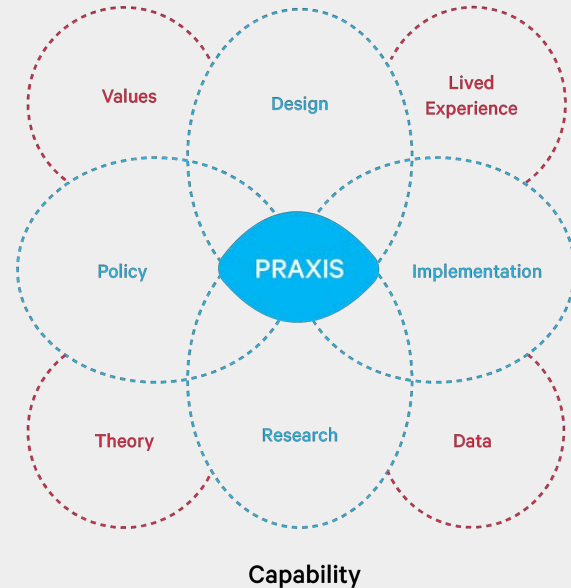

Take a few minutes to consider:

Where are you positioned now?

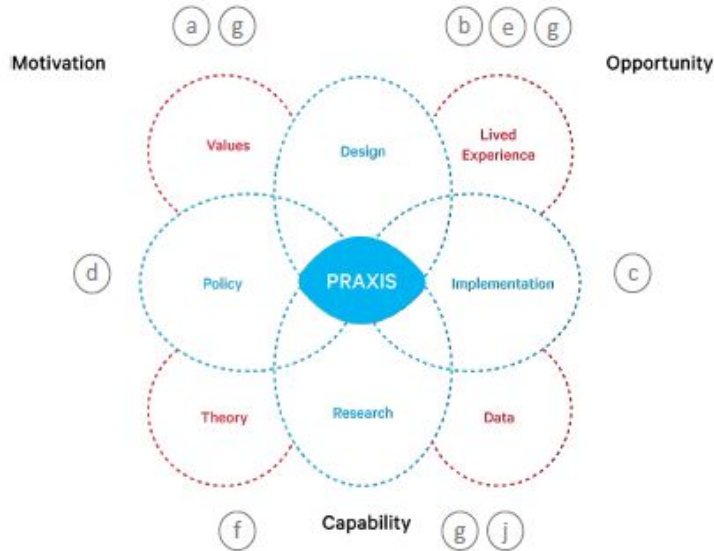

What were some points in your journey to this place?

Motivation

Opportunity

'Praxis' framework

Hardly ever

Almost always

To what extent are you able to...		1	2	3	4	5
a	work in a deliberately values-centred/ethical way – seeking to improve the social conditions of the most marginalised, to maintain/enhance human dignity?					
b	work relationally – design/evaluation as co-production, including 'non-traditional' participants?					
c	seek to influence through building capability and drawing attention to and creating new opportunities? (more than information provision, persuasive communication)?					
d	work across and seek to influence unique (locally situated) problems while also addressing systemic problems?					
e	encourage multi-disciplinarity?					
f	draw on formal theories and evidence-bases, and generate local theories [through abductive reasoning] to create 'good enough' explanations and/or courses of action?					
g	work in a fair-minded way – drawing attention to different stakeholders/different stakes = different value propositions. This includes cultural differences?					
h	define and identify 'good enough' evidence to credibly support decisions that fundamentally affect people?					
i	work adaptably/developmentally in your approach to design and evaluation – doing what it takes or enough 'to 'make a difference'?					
j	Seek to disrupt assumptions and look for counterfactual evidence?					

In pairs

Introduce yourselves
reflecting on something
in the petal

Share something that
stood out from the
scales for you

To explore today

Please capture

A question that you bring today

or

Something you would like to explore today?

Let's gather

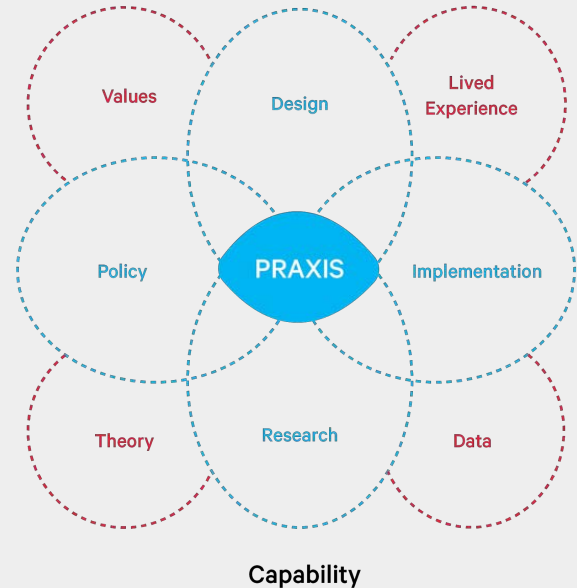

Locate where you are most currently

Introduce yourself and **one thing** about your **journey to here** that you would like to emphasise/share

The questions/things you'd like to see covered today

Motivation

Opportunity

10.00-10.45

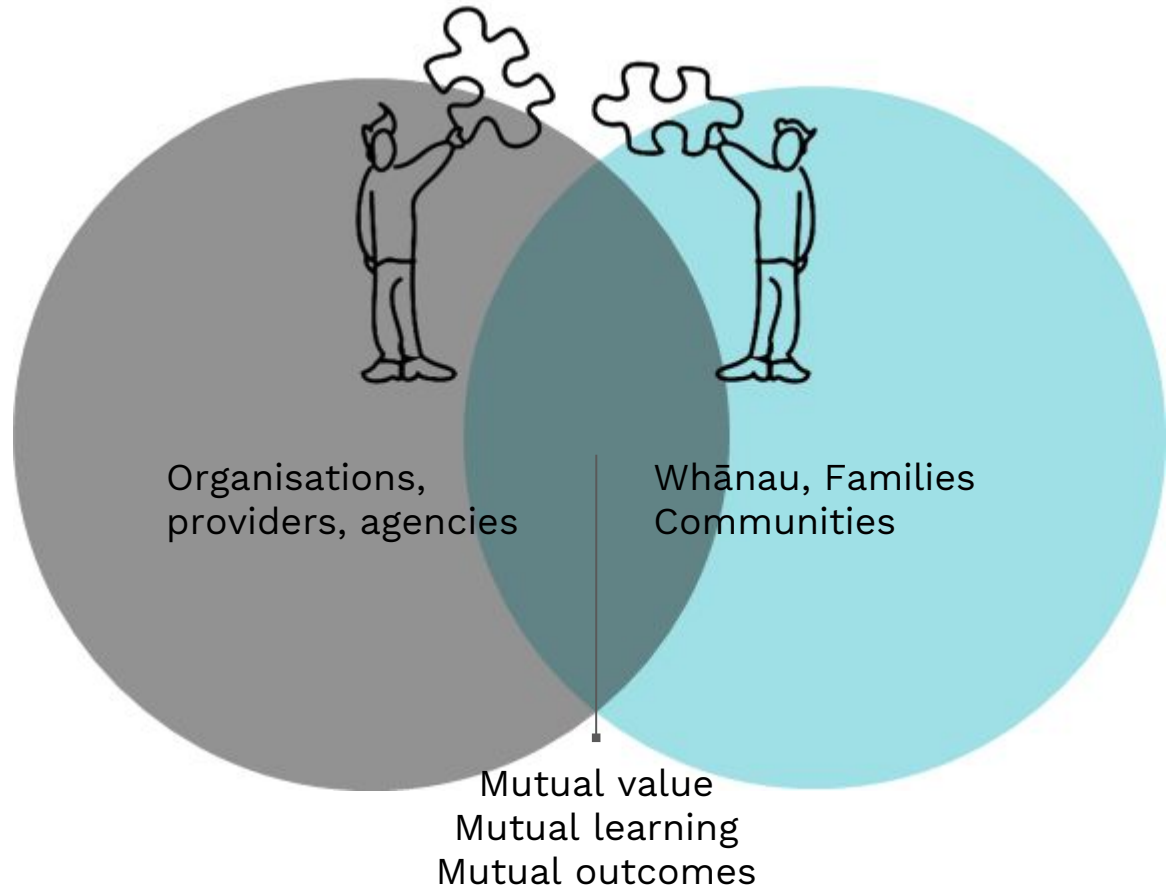

**What do we mean by
co-design?**

A brief introduction

Co-design

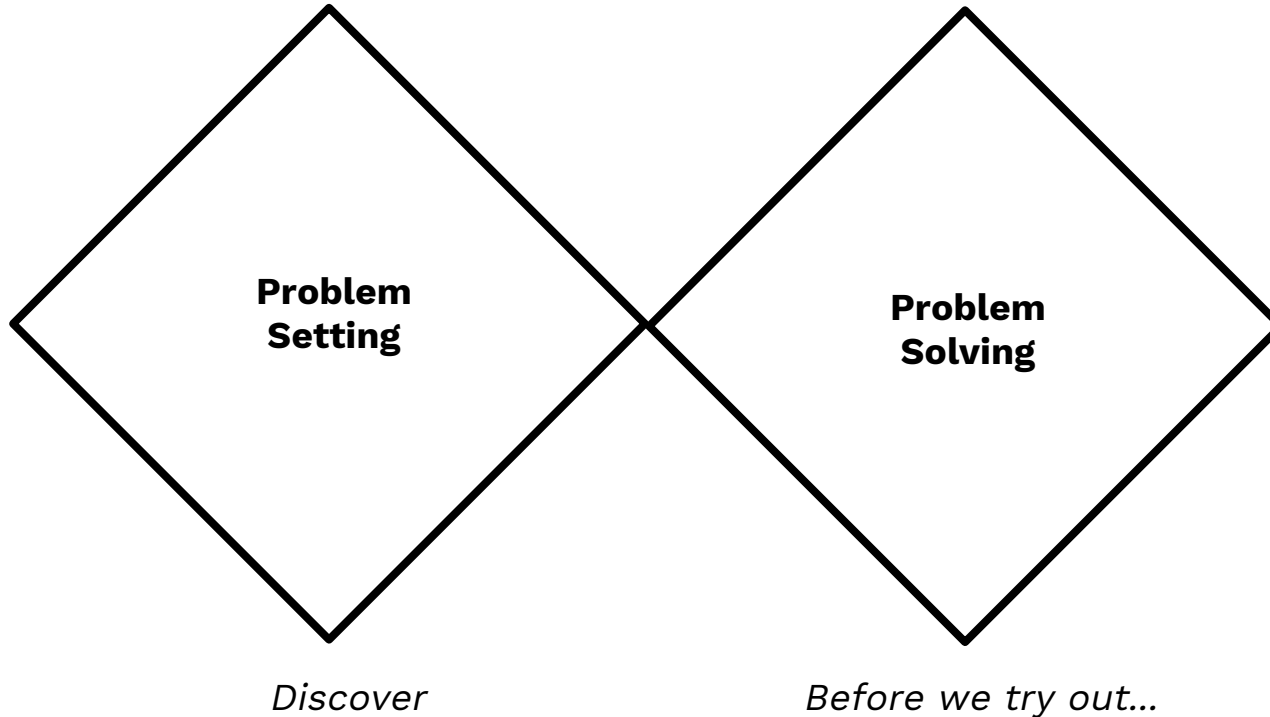

Increasing impact by working *with* people, families, whānau and stakeholders to collectively design and implement new ways of working and doing.

Co + Design

Design 'process': getting to a new state/bringing something new into the world

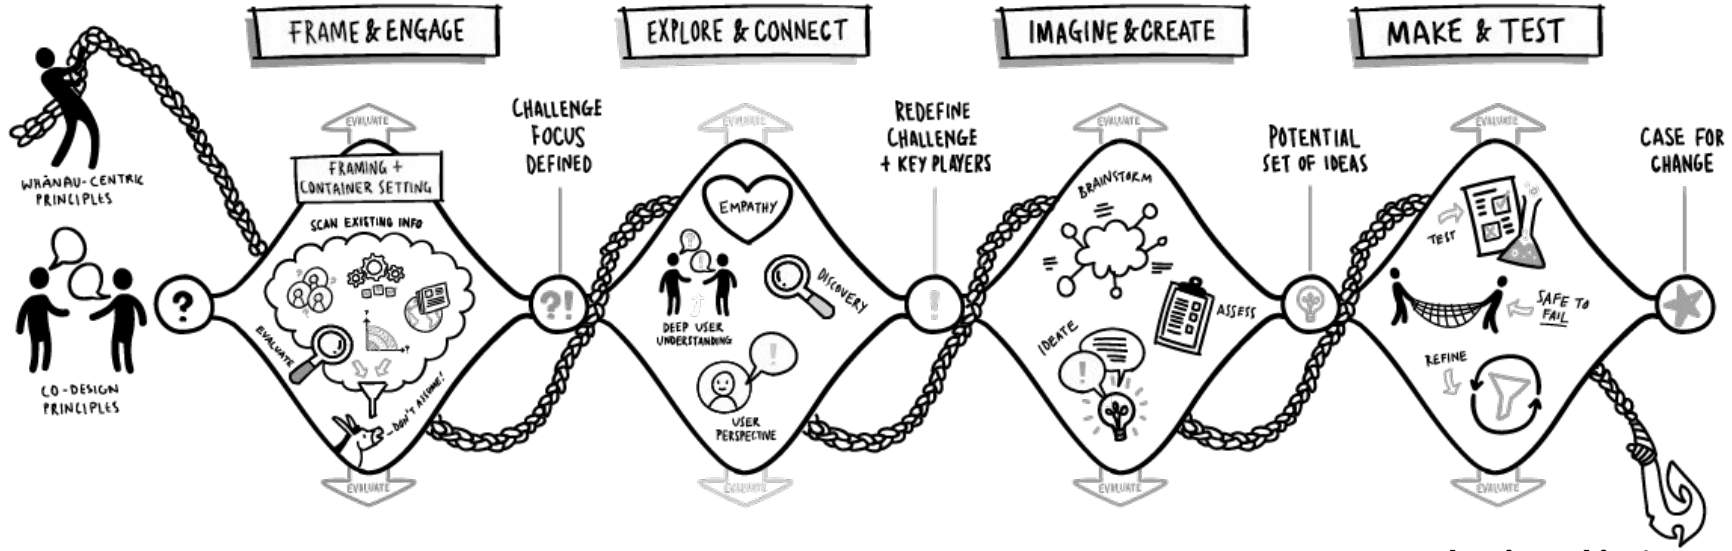

Tikanga Māori Co-design

Image from
<http://www.communityresearch.org.nz/webinar-co-design-community-development-korero-insights-maori-co-designers/>

Examples of tikanga Māori articulations of co-design, see also for example: <http://www.ngaaho.maori.nz/page.php?m=187>

What do we already know about the issue?

Who needs to be involved?

What is people's current experience?

What are the barriers and opportunities for change?

How might things be different?

What can we try?

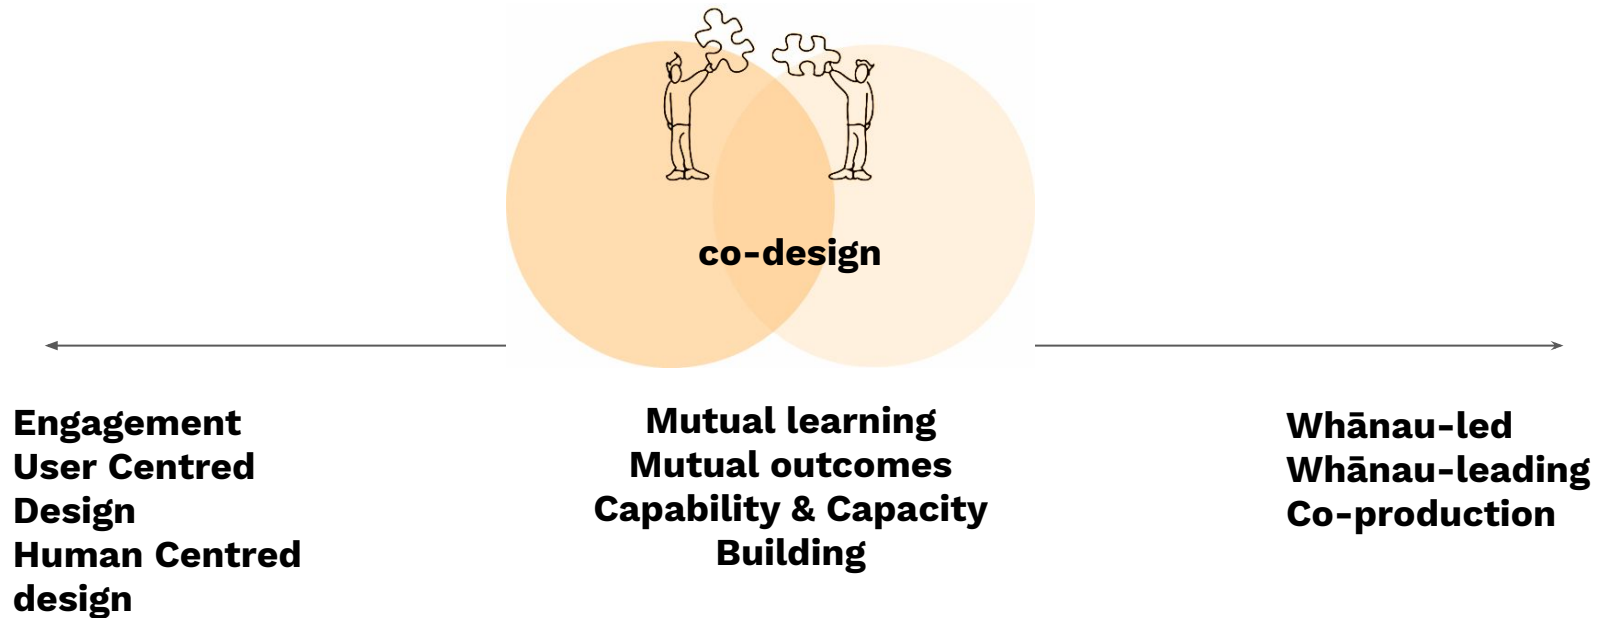

What is and isn't working? What needs changing?

What is needed ongoing?

Questions we might ask in the design process

A continuum

(co)Design qualities

**Human lens,
Systems view**

Visual & Tangible

**Iterative, Emergent
& Developmental**

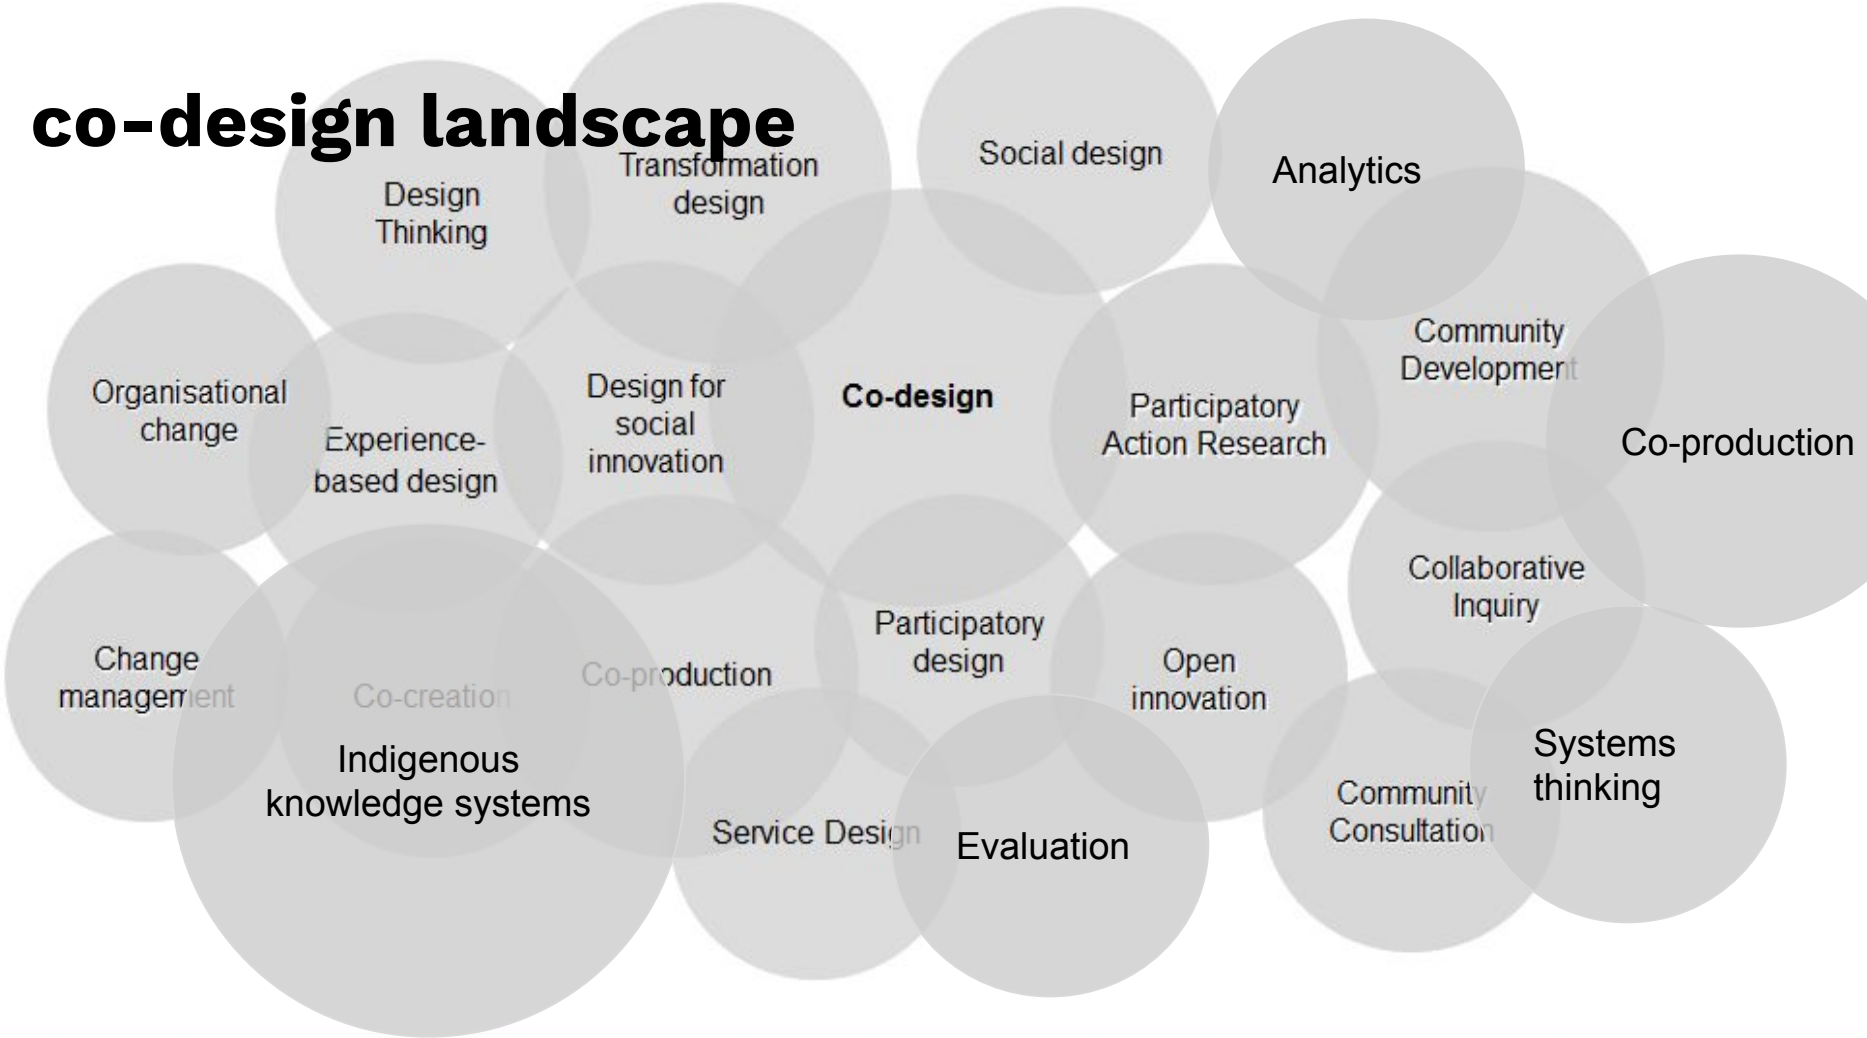

**Collaborative &
Participatory**

**Strengths-based,
Capacity building**

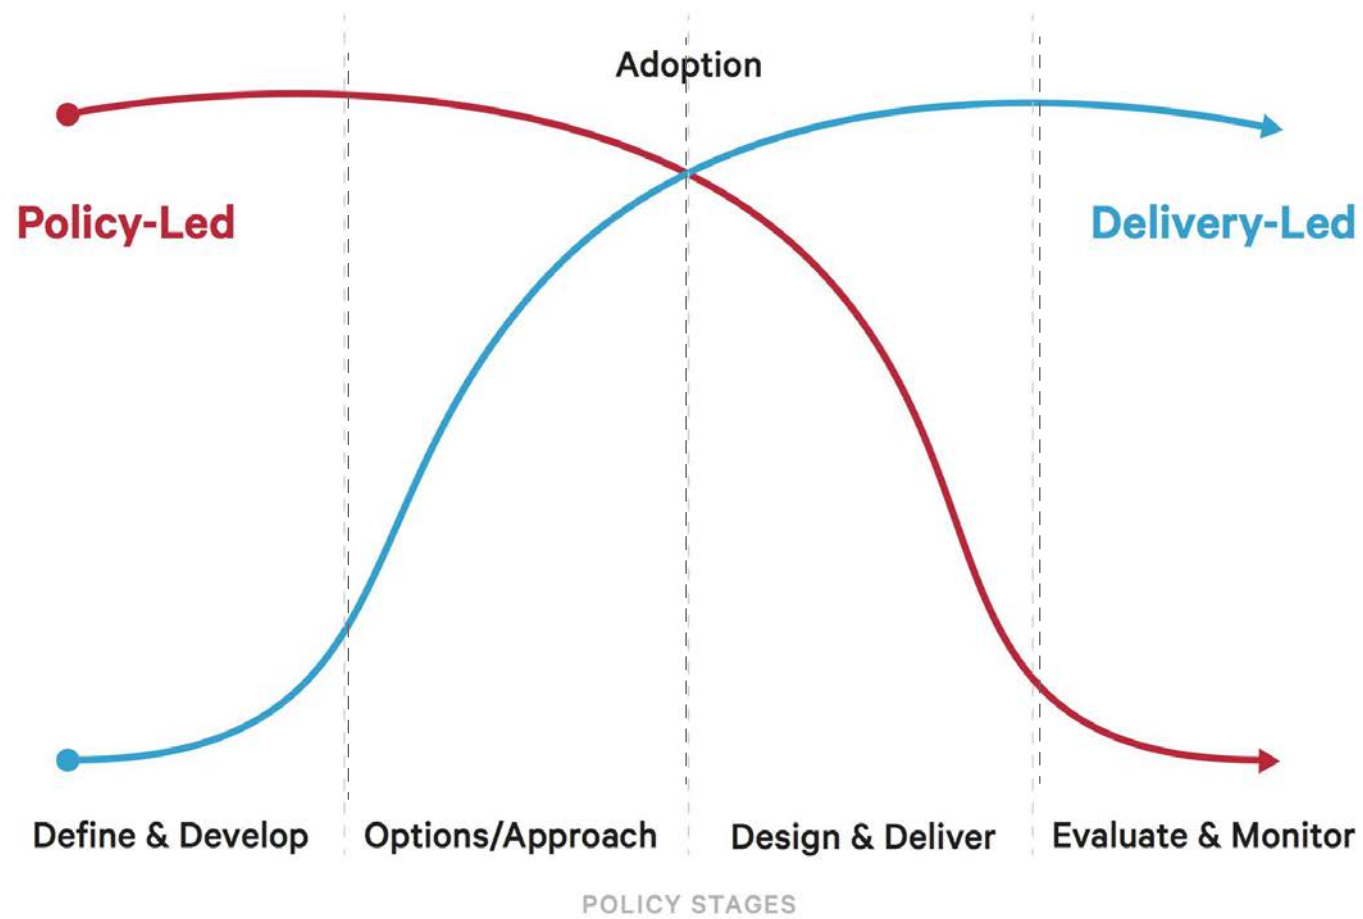

co-design landscape

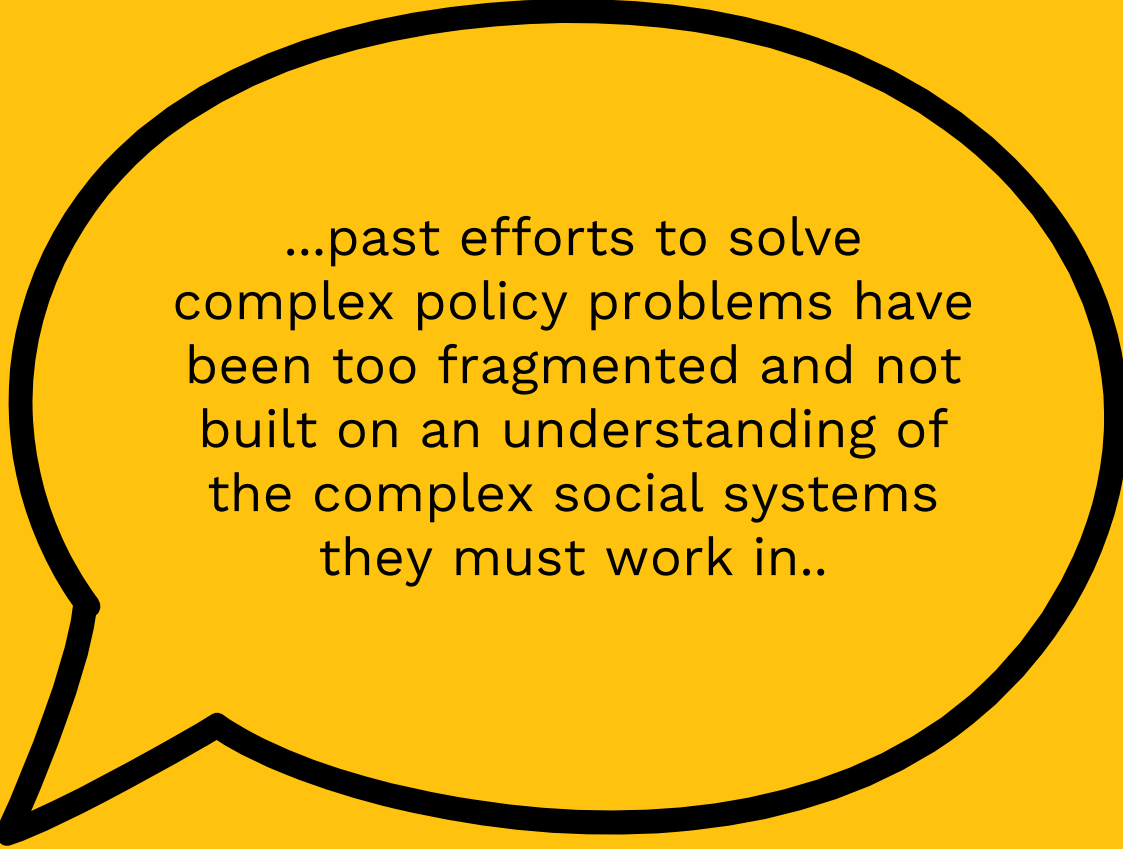

**Why the interest in
co-design for
developing social
policy, programmes
and social
innovation?**

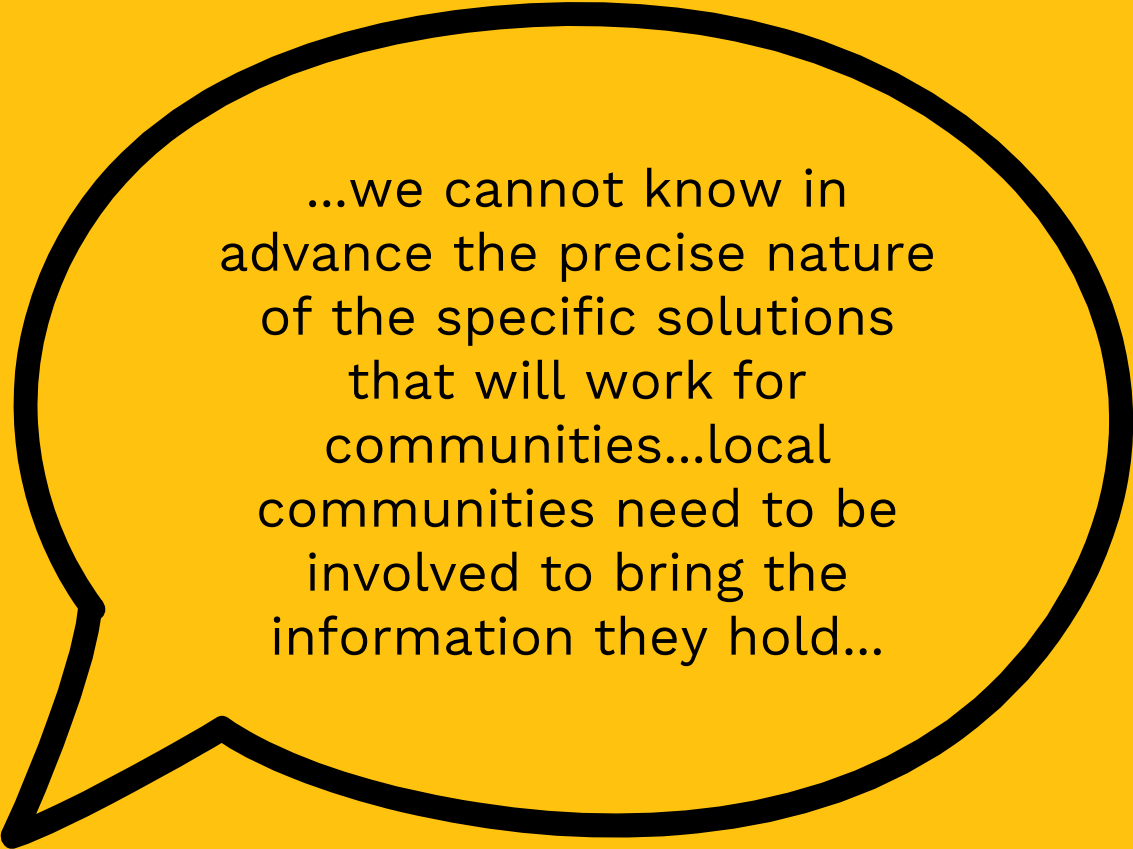

The landscape

...past efforts to solve complex policy problems have been too fragmented and not built on an understanding of the complex social systems they must work in..

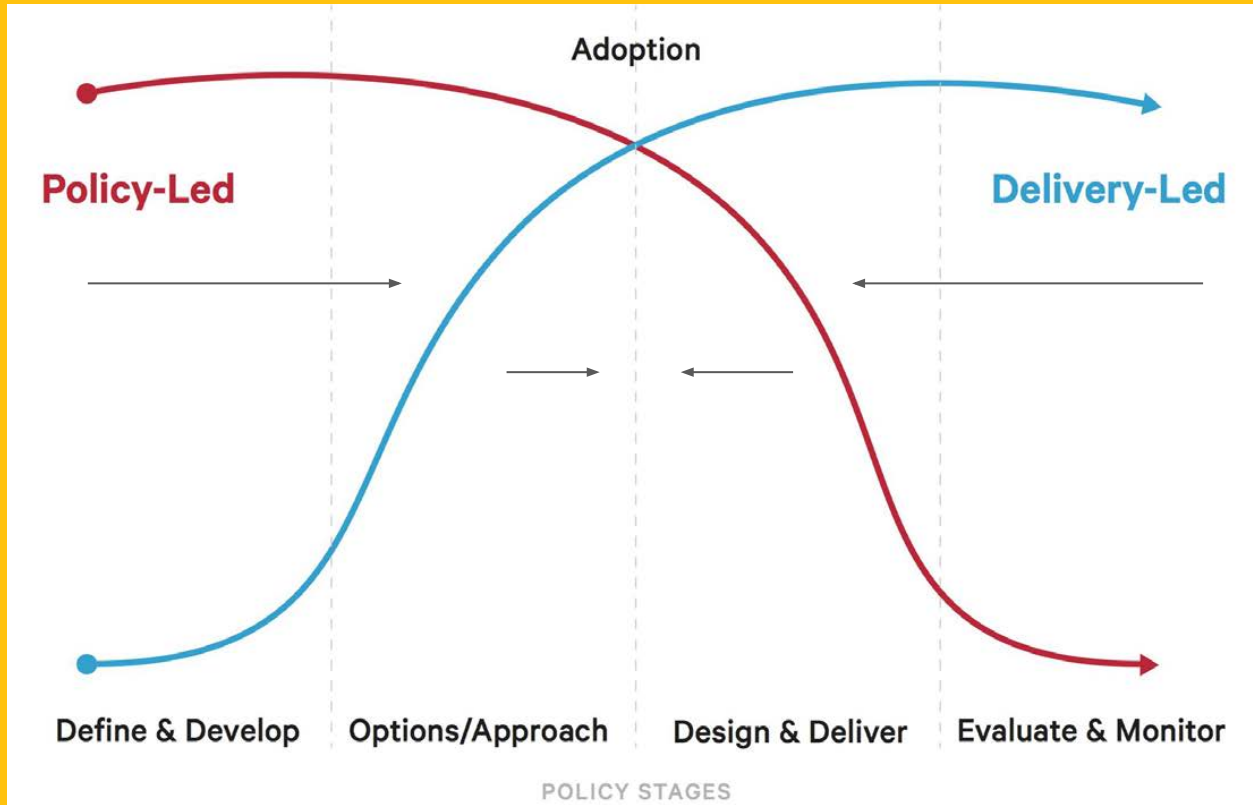

...we cannot know in advance the precise nature of the specific solutions that will work for communities...local communities need to be involved to bring the information they hold...

“A complexity informed approach moves us from one size fits all central policies, to adaptive and collaborative approaches...”

From Complexity to Collaboration A provocation for change by
Elizabeth Eppel, Girol Karacaoglu and Donna Provoost 2018

When done well, design can offer

Means to involve multiple stakeholders & perspectives

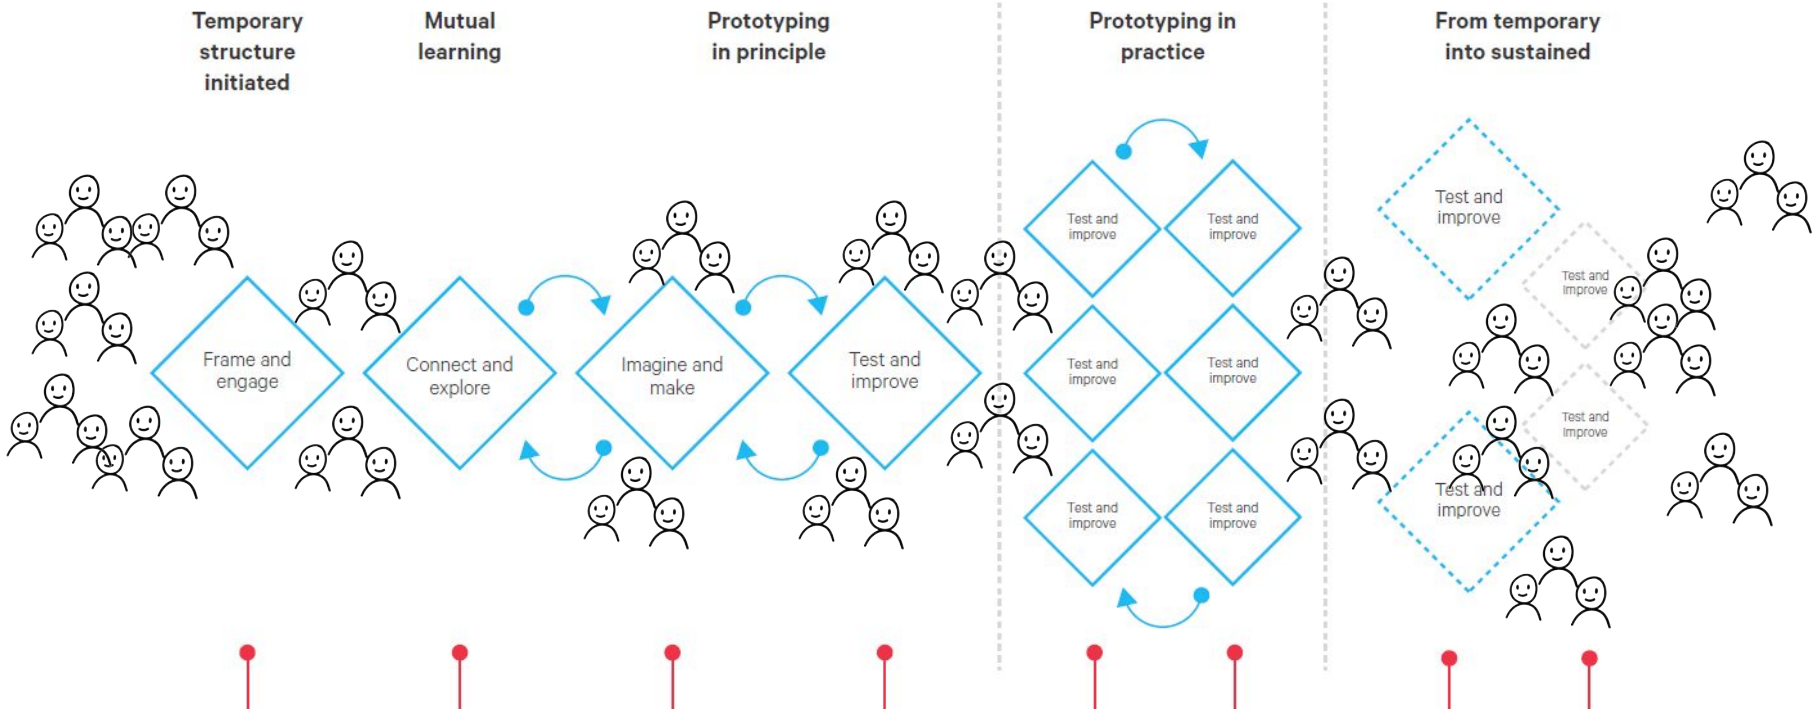

Engagement with complexity, localisation, specifics of place

Learning loops across

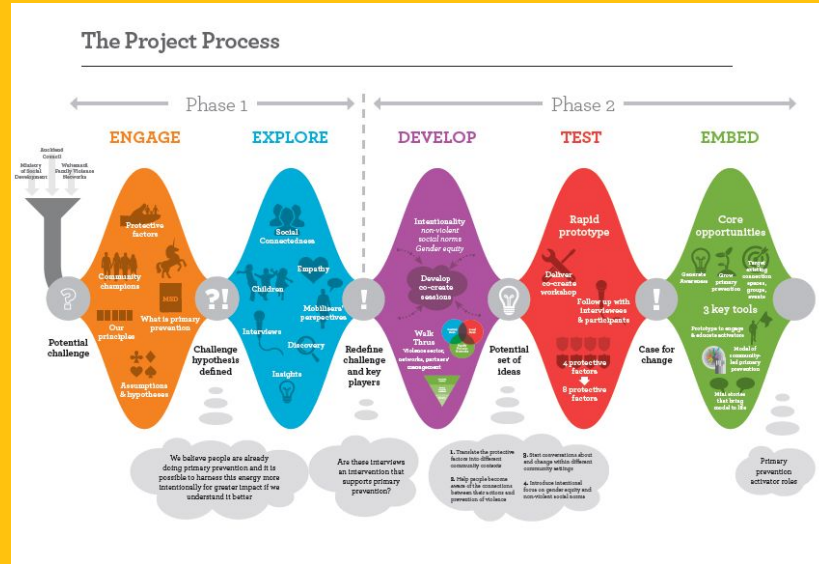

Building of capability and capacity

Co-design for social innovation

A physical walk through of the Wellbeing in Waitemata project

Reflection

How does this process sit for people as an experience of co-design?

Are people in this process now?

Are these points familiar/unfamiliar?

Reflection

What obvious points of overlap do people see?

What questions does this raise for people?

Break

10.45 - 11.00

Level 2. Project / process convergence

Who are we in this? Where are we now?
What edges do we traverse?

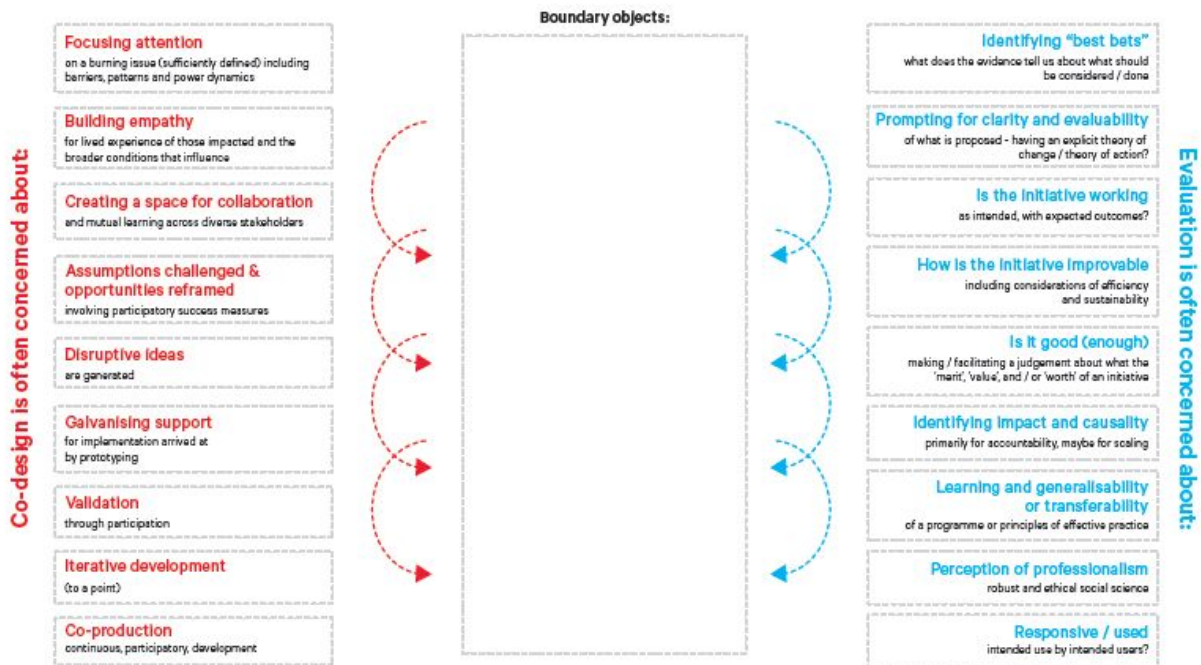

(2)

In social/policy projects

Co-design and Evaluative practice

Musing on points of difference, synergy and similarity

Q What does it provoke you to think about in your own practice?

Q Which people, tools and strategies support these activities and perspectives in your mahi?

Q What would benefit from greater emphasis in your mahi? What should we be sceptical about?

Wellbeing in Waitematā

Convergence in projects/process

Example of design drawing in evaluative thinking

Wellbeing in Waitematā

Highlighting points of convergence

Localising an existing evidence base and drawing in diverse expertise “what do we know that works”

Making contribution back to the evidence-base related to community-led primary prevention

Protective factor cards

These factors are underpinned by the following values:

E Tu Whānau

- Te mana kaha o te whānau
- Aroha
- Whānaungatanga
- Whakapapa
- Mana / Manaaki
- Kōrero Awahi
- Tikanga

Nga Vaka O Kāiā Tapu: Pacific Conceptual Framework

- Family harmony, peace, well-being and abundance
- Strengths-based
- Reciprocity
- Belonging
- Respect
- Genealogy
- Tapu relationships
- Language

Te Rito Strategy

- Safety
- Freedom from violence
- Protection of children and young people
- Accountability

Wellbeing in Waitematā

Highlighting points of convergence

Surveying for feedback all the way through

Capturing multi-level outcomes

Key outcomes

- We've increased our knowledge, readiness and capability for community-led primary prevention
- We've contributed to the evidence base for what is known about community-led primary prevention
- Community-led primary prevention has been activated in Waitematā

Section 1 Introduction and key results

Working together to achieve whānau wellbeing in Waitematā

3. Activating community-led primary prevention of family and sexual violence in Waitematā

As a result of being involved in this project, community members, and others who participated in the project, have already begun to consider and implement changes and develop practices that promote the protective factors for family and sexual violence.

"This has lead to us thinking about ways we can make playgroup more accessible to people who don't know about us or aren't confident in coming along to a new community group. We have also been discussing ways we can involve other.. locals in our playgroup whānau."

"I have taken time to go to my neighbour and introduce myself. I have subsequently been the happy recipient of home baked goodies"

"I am going to introduce myself at my neighbour and ask community group in my neighbourhood to help support"

"I have spoken to my work colleagues about the workshop and discussed how these factor are relevant and we are embedding these in our practice already - fostering resilience and building communities."

"Keep working with local paper to look next if community groups that support and help"

"Do people who provide community events need to know that their work prevents violence crime etc? How can we let them know?"

Wellbeing in Waitematā

Highlighting points of convergence

Using Behaviour Change Wheel (Michie 2011) as a way to guide prototyping as well as the output

6

I manage community facilities

eg. manager of library or sports centre

M T E R I E N

What can I do?

- Provide training for staff on primary prevention
- Review facilities' programmes against primary prevention and measure
- Include primary prevention principles in terms and conditions of use of facilities
- Create environmental and social structures, policies, incentives and an organisational culture that supports primary prevention

The focus of our work addresses many of the protective factors and this extends the work we can do.

Role	Manager of Community Facility
Personal History	Born in NZ, married with 3 children
Sees?	Hundreds of community groups using dozens of facilities, staff who are dedicated to their local community
Feels?	Responsibility to provide safe place for staff and community to learn and grow
Motivated by?	Getting the best out of people, empowering others to achieve
Opportunities for action	Primary Prevention training for staff so understanding of primary prevention is threaded through practice Create opportunities for communities to learn about primary prevention and apply to their own life Include specific primary prevention principles in terms and conditions of use agreements Ensure the norms promoted in the physical and social spaces of facilities reflect the protective factors Review facilities' programmes, target populations against primary prevention principles.

The Model: Nine roles for activating community-led primary prevention of family and sexual violence.

What is my primary area of influence and how can I promote the primary prevention of family and sexual violence?

- 1 I am a Community Member**
I can promote primary prevention by modelling positive social norms.
M
- 2 I am a Community Mobiliser**
I can promote primary prevention by encouraging positive social norms within the community spaces I organise.
M E R P
- 3 I work in the Family & Sexual Violence sector**
I can share my knowledge of family and sexual violence and provide specialist support and advice.
M E P
- 4 I work in Community-led Development**
I can identify ways to embed the primary prevention of family and sexual violence in my community-led development work.
M E R P
- 5 I work in Community settings**
I can enable spaces for connection and promote activities that support protective factors in the setting where I work.
M E R E N
- 6 I manage Community Facilities**
I can ensure primary prevention principles are reflected in the social and physical environments I manage.
M T E R I E N
- 7 I am a Policy Advisor**
I can provide high quality advice so that policy supports primary prevention.
M E R I E N
- 8 I am a Community Champion**
I can work with my community to localise primary prevention messages and resources.
M E T P
- 9 I am a Primary Prevention Activator**
I can engage and activate people, groups and organisations around primary prevention.
M P I T E N

Individual
Whānau
Community
Institutional
Societal

Key: Behaviour Change Interventions can take different forms:	
M Modelling	Change social norms and behaviours
E Education	Improve understanding of protective factors and risk factors
EN Environmental restructuring	Change physical and social contexts to reinforce protective factors and reduce risk factors
P Persuasion	Stimulate action through positive communication
T Training	Develop professional skills or behaviours
I Incentives	Offer skills to support primary prevention, escalation and activation of protective factors
R Restrictions	Guidelines or policies that promote/limit/certain behaviours
EN Enablement	Remove barriers, create opportunities (eg. education, training and environmental restructuring)

Wellbeing in Waitematā

Highlighting points of convergence

Continuing to track outcomes/impact

Outcomes Harvesting
Extending the com-b model

Background to this progress assessment

At the completion of the working together to achieve whānau wellbeing in Waitematā project in November 2016, the formal collaboration between project partners came to an end. Project partners intended to focus back into their own organisations with the view to embed learnings, share and socialise the report and tools within their own networks, grow connections with new stakeholders and continue prototyping.

The project partners committed to coming back together within the first six months of 2017 to review progress. In June of 2017, Auckland Council commissioned, with the support of the Ministry of Social Development, this progress assessment. This assessment captures the progress to date in applying the learnings and tools including early impacts, opportunities and barriers.

Intent of this progress assessment

- ① To track the impact and influence of the project across project partners, key stakeholders and beyond, since project completion.
- ② To capture key learnings from ongoing prototyping including enablers and challenges.
- ③ To share real life examples of community-led primary prevention of family and sexual violence in action.
- ④ To make recommendations for the future - what we should keep doing, where are the opportunities and the resources required.

Approach:

An Outcomes Harvesting methodology¹ was used and included the following data gathering activities:

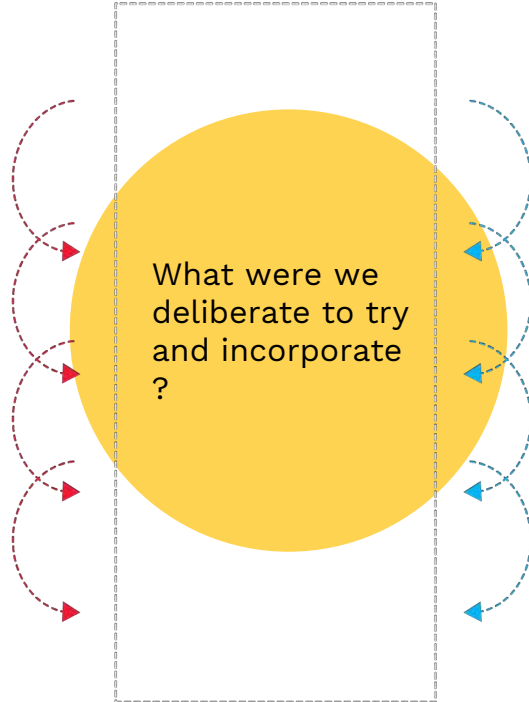

- Survey of project partners to elicit reflections about experiences and activity since project completion. This included what they have and haven't been able to take up and apply, barriers and challenges and any unexpected outcomes.
- Survey of the leadership group, interviewees and walkthrough attendees to elicit reflections about experiences and activity since project completion.
- Interviewing of key people/stakeholders that have been active in the follow up work or are critical to the momentum continuing.

Reflecting on key points of convergence?

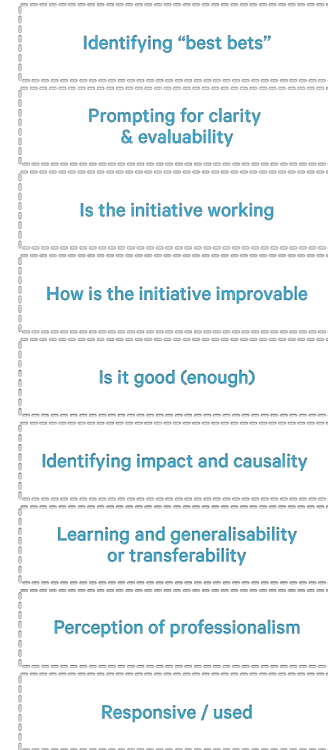

Co-design is often concerned about:

Boundary objects:

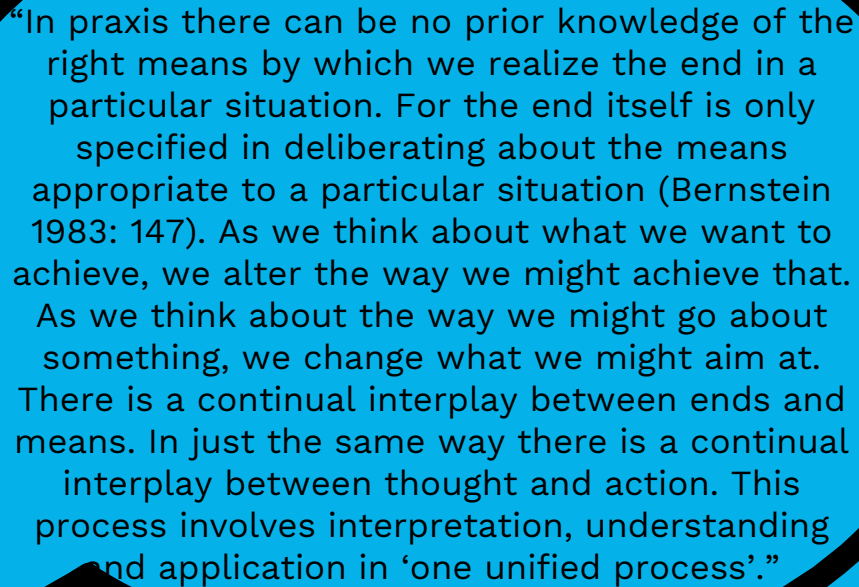

Evaluation is often concerned about:

**Evaluation
as personal
praxis**

**It's about
intent**

Developmental evaluation

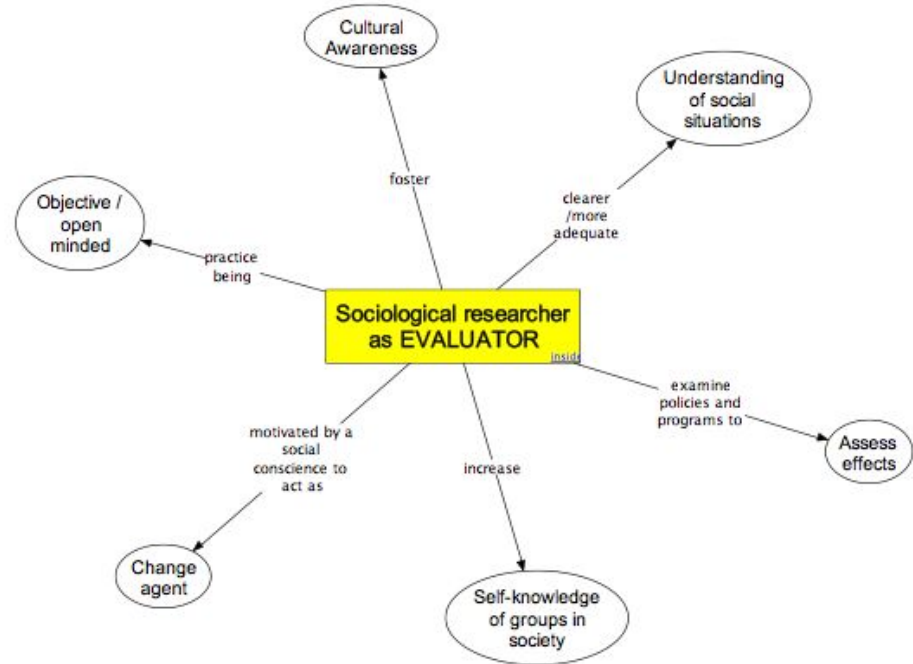

“In praxis there can be no prior knowledge of the right means by which we realize the end in a particular situation. For the end itself is only specified in deliberating about the means appropriate to a particular situation (Bernstein 1983: 147). As we think about what we want to achieve, we alter the way we might achieve that. As we think about the way we might go about something, we change what we might aim at. There is a continual interplay between ends and means. In just the same way there is a continual interplay between thought and action. This process involves interpretation, understanding and application in ‘one unified process’.”

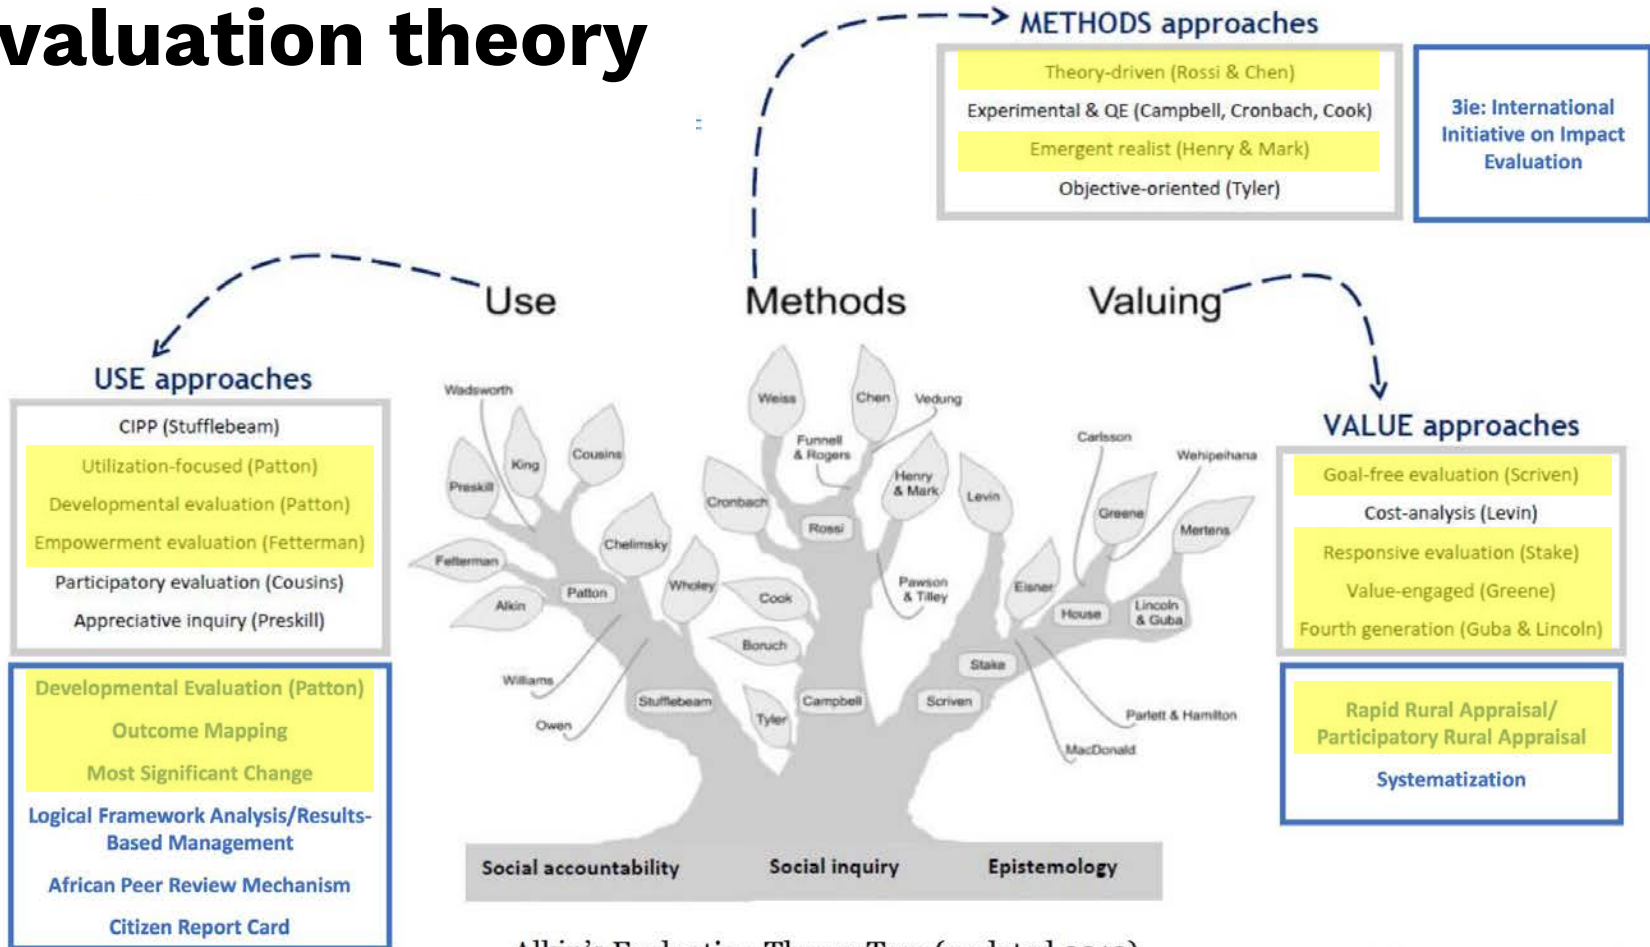

**We don't
know
nothing!**

Praxis – starting with initial reflections on evaluation practice

Comms_essay_layout - (Producer/s)

Evaluation theory

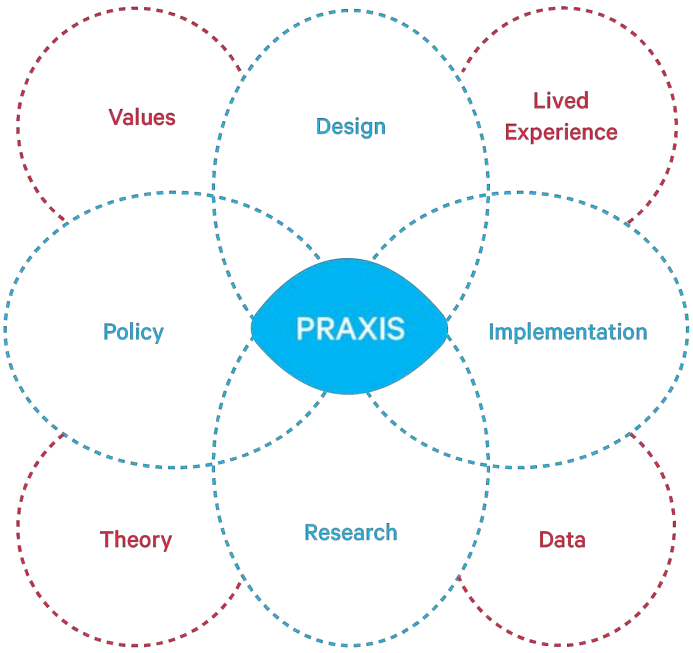

Alkin's Evaluation Theory Tree (updated 2012)

Praxis framework

Motivation

Opportunity

Oranga Tamariki Pilot

Convergence in projects/process

Example of evaluation sitting in parts of co-design

Oranga Tamariki Pilot

Convergence in projects/process

Example of evaluation sitting in parts of co-design

- Looking for **co-design's benefits**, if any?
- Assisting with **sense-making as a one of the 'team'**
- Developing **'emergent' theories of change**
- Seeking **opportunities for co-production** - how is the view of and from lived experience represented (testimonio, participatory video)
- What can **social science offer** frameworks, systematic data gathering and representing data different ways suggest to us - problems, ways forward, natural experiments?
- **Is what I'm 'doing a thing'** - emergent theories, principles of effective practice, e.g. the power of the research interview as a form of social (change practice)
- **Pushing back to policy** – alternative framings, opportunities to learn

Check in

Co-design and Evaluative practice

Musing on points of difference, synergy and similarity

Co-design is often concerned about:

- Focusing attention**
on a burning issue (sufficiently defined) including barriers, patterns and power dynamics
- Building empathy**
for lived experience of those impacted and the broader conditions that influence
- Creating a space for collaboration**
and mutual learning across diverse stakeholders
- Assumptions challenged & opportunities reframed**
involving participatory success measures
- Disruptive ideas**
are generated
- Galvanising support**
for implementation arrived at by prototyping
- Validation**
through participation
- Iterative development**
(to a point)
- Co-production**
continuous, participatory, development

Boundary objects:

Evaluation is often concerned about:

- Identifying "best bets"**
what does the evidence tell us about what should be considered / done
- Prompting for clarity and evaluability**
of what is proposed - having an explicit theory of change / theory of action?
- Is the initiative working**
as intended, with expected outcomes?
- How is the initiative improvable**
including considerations of efficiency and sustainability
- Is it good (enough)**
making / facilitating a judgement about what the 'merit', 'value', and / or 'worth' of an initiative
- Identifying impact and causality**
primarily for accountability, maybe for scaling
- Learning and generalisability or transferability**
of a programme or principles of effective practice
- Perception of professionalism**
robust and ethical social science
- Responsive / used**
intended use by intended users?

Q What does it provoke you to think about in your own practice?

Q Which people, tools and strategies support these activities and perspectives in your mahl?

Q What would benefit from greater emphasis in your mahl? What should we be sceptical about?

Individually Reflect:

Using the questions on the sheet as a jumping off point...

Take a few minutes to think about points of convergence in your own work.

In your groups reflect/share:

***Convergence in
projects/process***

Share with your table

Consider:

What are some points
of tension?

What helps us
work across?

Share back?

As is

Now we often...

WORRY THAT WHEN
WE ENGAGE PEOPLE
WE END UP
OVER-PROMISING...

To be

In the future we will...

ENGAGE EARLY BUT SET
CLEAR PARAMETERS
& SCOPE FOR WORK

AS IS TO BE CARDS

As is

Now we often...

Site policy for service design
and customer insights
and delivery - Policy updates
are developed long before
we test, prototype and
sometimes they are implemented
with no prior engagement at all

To be

In the future we will...

We will think about a
policy innovation system and
the broad range of skills, insights
and innovation we need to develop
effective, sustainable policies + services

AS IS TO BE CARDS

Are there practice shifts we might want to work towards?

Things we might want to start doing more of?/less of?

Capture some of your discussions through these practice cards.

Share back?

Supporting an evaluative mindset in design for social innovation

Some tools & strategies for
supporting convergence

‘Boundary objects’ ?

Integrating evaluative questions into the design process

FRAME & ENGAGE

Clarifying the intent: who needs to be involved & how?

- What is important to those impacted?
- Who needs to be involved and how (and who decides this)?
- What is the readiness of those involved for the process and for the change?
- What do we already know about the issue?
- What are the cultural contexts we are working in?
- What assumptions might we hold?
- What principles will we be held by?
- How might we track success?
- What is currently happening in this space?
- What are some of the root causes?

EXPLORE & CONNECT

Working with whānau and stakeholders to develop new insights & understanding

- How might we learn together with whānau about people's current experiences?
- What is working well now and what is not, why?
- How can we work with our stakeholders and whānau to prioritise and reframe the opportunity?
- What are the implications and relevance of the local context?
- What are our shared success measures?
- What are the potential levers for change and who needs to be involved?

IMAGINE & CREATE

Working with whānau and stakeholders to explore possible responses

- How might we work together with stakeholders and whānau to generate and explore possible responses?
- What might we try?
- What does existing evidence tell us about what has been tried and might work best?
- What are the practice changes that might be required to achieve these ideas?
- What will we prioritise?

MAKE & TEST

Testing new ideas and prototypes in principle and in practice

- How can we engage stakeholders and whānau in testing and evaluating concepts and solutions?
- What do we want to learn and how will we learn that?
- Who needs to be involved?
- What is and isn't working in the prototype? What needs changing?
- What are the outputs from the prototyping?
- What are we learning about the capacities and capabilities needed to embed change and how might we help build these?
- What biodegradable supports are needed to support change and implementation?
- What needs to come next? What might transition to BAU involve?
- How are we building whānau and organisational capacity through our engagements?

EVALUATIVE MINDSET

What changes have come already from our engagements / What capacities are being built / What barriers have we encountered
What does this tell us about opportunities/enablers/direction and what is needed to achieve the outcome / What are we learning about the system
What levers or approaches are likely to have the greatest impact now and in the future / What risks need to be managed
What are the collective changes and outcomes we need to be aiming for / How might we measure these

Theory of Change

Especially for prototyping

From Ingrid Burkett
Tasci.org.au

Prototyping work plan

Prototypes may be small or run over time.
The questions below can help tease out the intent of prototyping.

Auckland Co-design Lab

What are we prototyping?

What is the objective of the prototype? What aspect or concept will be tested?

What do we want to learn about through this prototype?

What questions do we want answered?

What is our Theory of Change?

We believe that

will lead to

What assumptions are embedded that need testing?

Who needs to be involved?

How are we going to test it?

Where? What methods? Over what time?

What issues or constraints might we expect?

Testing & evaluation

How will iterations and feedback be managed?

What are the ethical constraints or risks involved with testing this prototype?

How will we know whether it has worked or not?

What design principles or user goals are we testing against?

Consider

- What is the reason for the prototype?
 - To explore and make ideas tangible?
 - To test and evaluate how well something works?
 - To communicate, share and make the idea accessible to others?

What do we want to learn about?

- Value (do others see value?)
- Feasibility (what would it take to make this?)
- Integration (how does this work as a whole?)
- Experience (what will this look and feel like for people?)

How might we build capacity for change through the prototyping process?

How might whānau-centric and co-design principles be applied in the planning and evaluation?

CO-DESIGN WORKSHEET

Outcome 'Menu'

Visual outcomes tool. Outcomes identified from practice and existing evidence that describe the changes we are looking for across practice and systems levels. Teams use these to consistently design and evaluate the different impact of projects along and in aggregate.

We can ask:

Which of these has been “switched on” as a result of this intervention?”

What else has emerged?

What didn't get switched on that we would have expected to see and why might that be?

Impact Stories

Outcome and impact tied to intervention

Palmy North

An experiment on the impact of short training and modelling of co-design practices to improve how youth health and wellbeing is enabled in a specific region.

"It was motivating to see the passion and dedication that others had about helping youth in Palmerston North. Which motivated me to want to do more through the Youth Council and possibly through collaborations in the future."

WHAT

Two day experiential training workshop to build co-design capability, motivation and opportunity for cross-sector partnerships in Palmerston North.

WHO

12 participants from the Palmy Youth Network including representatives from DHB, Corrections, YOSS, student associations and local young people.

"My motivation and commitment has increased in going out looking for extra wrap-around support and courses and programmes for our youths [...]. Going to meetings with others that work with youth."

Example of changes we saw as a result:

- Greater understanding of the barriers facing young people in accessing current services and the negative outcomes that result from poor experiences
- Opportunities identified and motivation increased to improve youth participation and service integration in the local area especially for young people currently not well-served in Palmerston North
- Increased connectivity across different sectors and the network

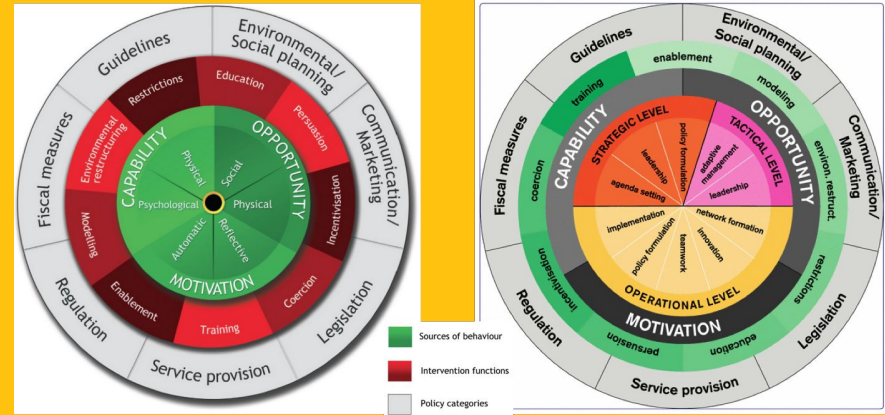

COM-B

Reflect:

*Convergence in
programmes/platforms*

Celebrate/Challenge:

How are you already supporting teams to build their evaluative mindsets and practice? What might we try?

What strategies and tools do people want to share at this point?

Lunch

Level 3.

Platform/Programme convergence

**Who are we in this? Where are we now?
What edges do we traverse?**

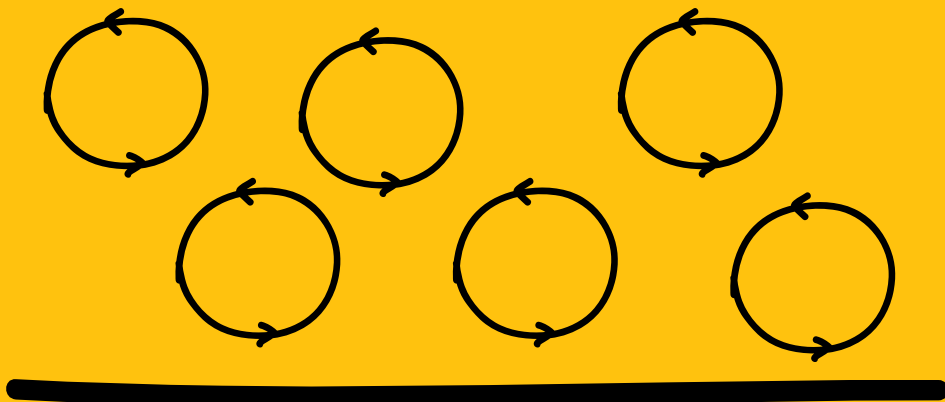

**Co-design (social
innovation) platforms**

**What do we mean by
a co-design (social
innovation)
platform?**

Characteristics of a social innovation platform

A shared platform with a focus on building capability, supporting prototyping, supporting social outcomes in and with communities (through supporting co-design)

Multiple different activities engaging different groups of people and partners (can look different because they are co-designed and therefore lead/localised)

Examples:

Tāmaki Health and Wellbeing (ADHB)

The Southern Initiative Healthy Families (MOH)

Lifhack (MSD)

Skip (MSD)

Generator (MSD)

Role of design and evaluation in social innovation platforms

Design

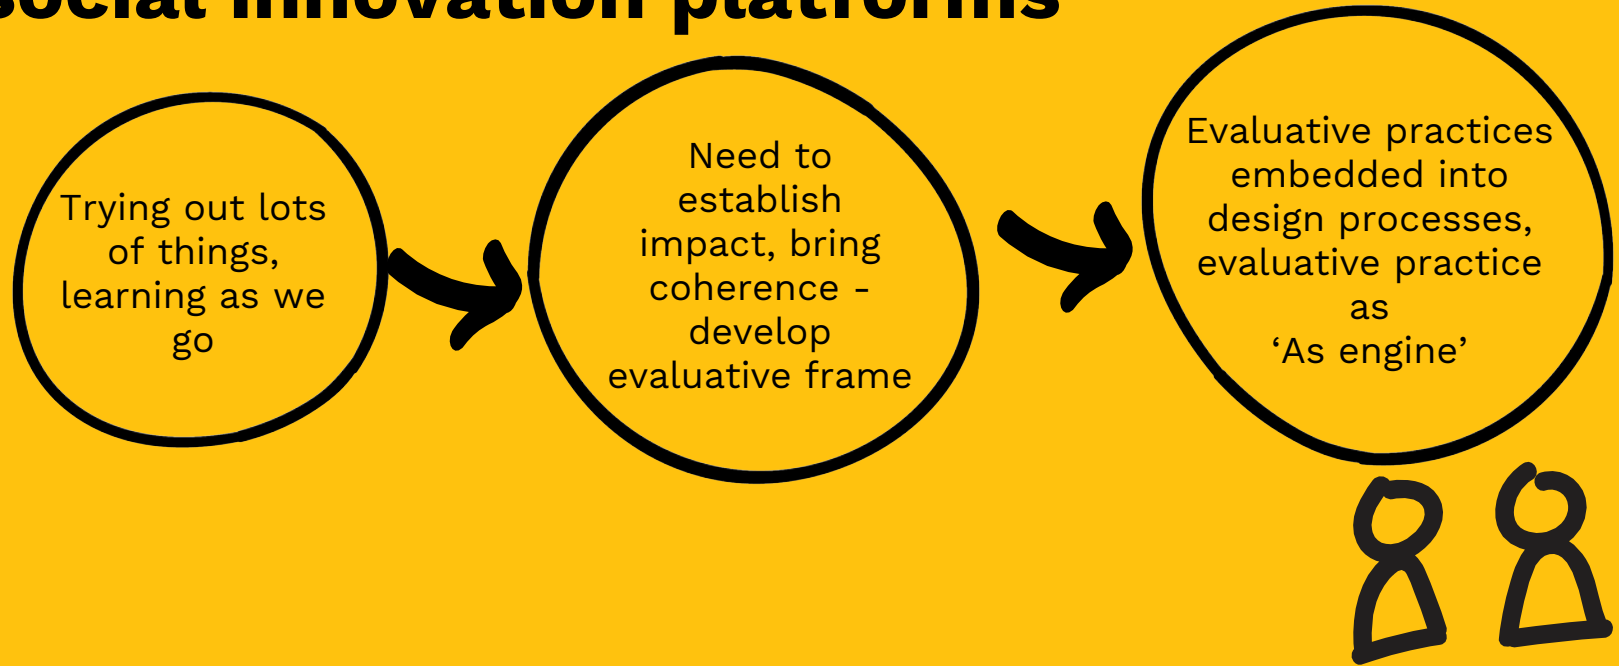

creates a space for enabling localised, local-led responses, involving different stakeholders actively in strengths-based ways

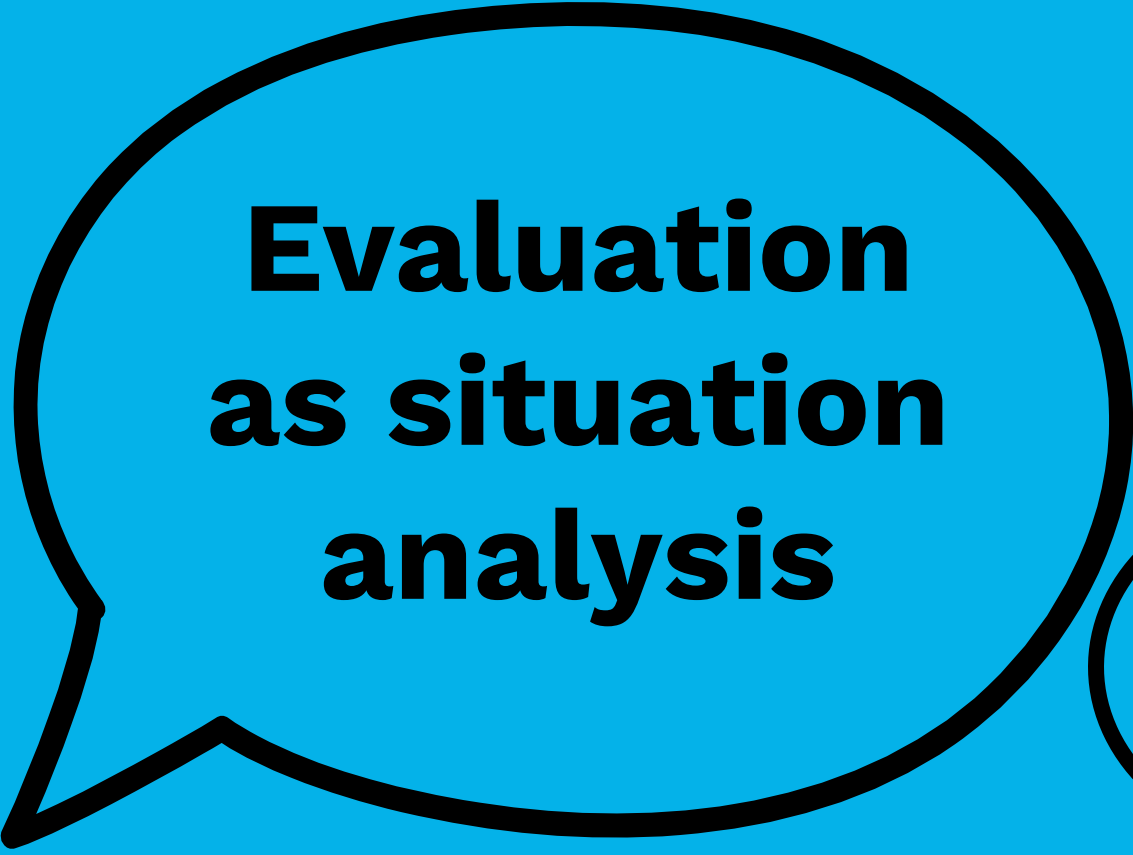

Evaluation

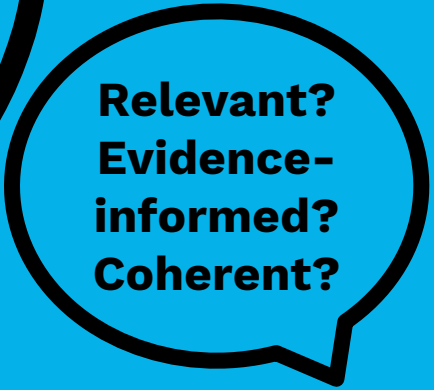

helps with learning, with accountability and redesign “is all the energy taking us somewhere?” What is happening for each effort, what about across all efforts collectively?

A pattern of development for social innovation platforms

**Evaluation
as situation
analysis**

**Relevant?
Evidence-
informed?
Coherent?**

- tentative services/systems design

Staged 'developmental' evaluation > services/systems design?

1. What SKIP is, where it fits, why it is important > *positioning is good!*
2. Evidence of effectiveness > partial > *what's to be done?!*
3. **Evaluation capability** - evaluation framework, data development options > *refocusing* (on risk and protective factors for children)
4. Establishing **evaluative monitoring** – data standards, tools, structuring data for analysis > reflective practice > *drives service development in communities (in conjunction with co-design)*
5. An **'unfinished project'** > navigating implementation barriers
6. Ideally, evaluative activity shapes SKIP's (re)design – what is SKIP...

SKIP - what is it?

Strategies with Kids | Information for Parents

SKIP is a nationwide network of individuals, community groups, government agencies, workplaces and national NGOs. Our aim is for all children in New Zealand to be raised in a positive way by parents and caregivers who feel confident about managing children's behaviour as part of a loving, nurturing relationship.

TIPS FOR PARENTS

Tips, videos and useful information for parenting under fives.

WHAKATiPU

A kaupapa that encourages strong whānau connections that nurture.

SUPPORT FOR COMMUNITIES

Funding, support, resources and inspiration to make your community a better place for children.

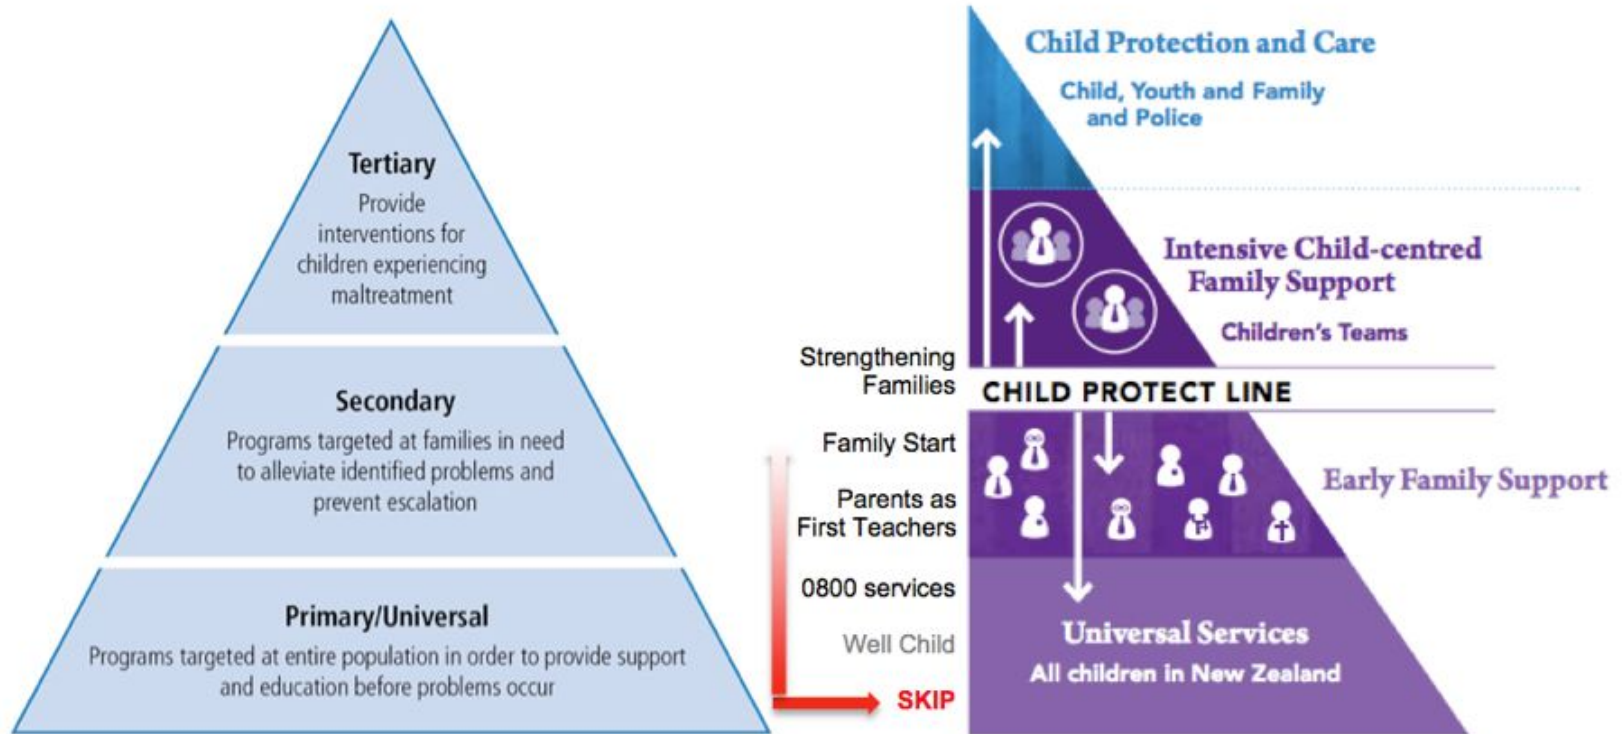

FREE RESOURCES

A resources library for workers supporting families of under fives.

SKIP's 'positioning' – relevant & important

(AIFS, 2014)

(MSD, 2012b: p4)

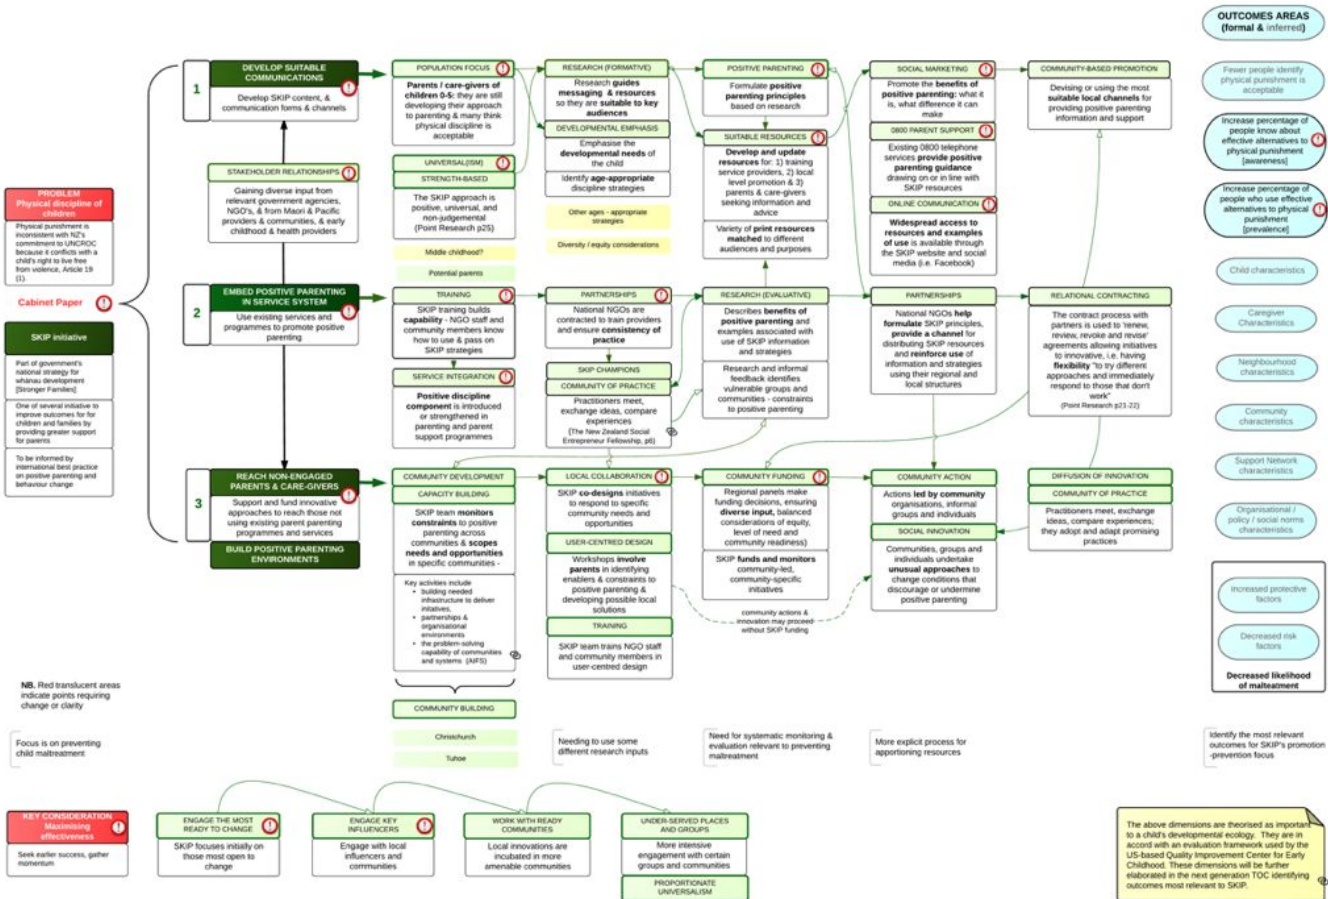

SKIP's 'positioning' – eco-mapping

Figure 2: Public Health categorisation of child maltreatment prevention programmes and their target group.²¹

Focus	Intervention level		
	Primary	Secondary	Tertiary
Child	Personal safety programs	Assertiveness training for "at risk" children	Therapeutic programs (e.g., group or individual therapy for abused children)
Parents/family	Universal nurse home visiting programs 3	Parent education programs 4	Child protection service referrals (e.g., anger management programs) 5
Community	General media awareness campaigns 1	Targeted media campaigns in "at risk" communities 2	Intensive community interventions (e.g., alcohol zero-tolerance zones) 6

By design SKIP operates at primary and secondary levels: through direct and indirect promotion enabling protective environments (1,2) and through partnerships (3,4). It can also reach into the tertiary level through community development (i.e. capacity building, co-design) and community funding, which enable community actions that increasingly include those most vulnerable (5,6).

SKIP's 'positioning' – looking for coherence

Evaluability?

**Data and
analysis for
determining
effectiveness?**

SKIP - is there sufficient evidence?

CONCLUSION 3: SKIP's effectiveness in influencing attitude and behavioural change is partially evident, although insufficiently demonstrated.

Although SKIP seeks to ensure that organisations and local champions are focusing on parents in need of greater support, and that the design of its innovations are relevant to its users (through user-centred design), SKIP's approaches to systematically *assessing* attitudinal or behavioural change for parents are generally underdeveloped, particularly for hard to reach groups.

Evidence rating: * * * * *

- SKIP Fund reports
- 2012 survey of resource users

Story type	Description
PROVIDER capability increased	This story focuses on a service provider having improved the organisation's capability to support parents' nurturing and attending to their children's development. The emphasis is on improving frontline practice across an organisation through changes in policy and procedures and through workforce development.
SERVICE improvement	This story is about modifying services or creating initiatives to better meet the needs of parents and children. The focus is on practically helping parents adopt and maintain positive parenting practices.
PARTNERSHIPS	This story is about governance and leadership - organisations and individuals working smarter together in order to be more efficient and effective in improving the situation of parents and children.
CHILD better off	This story clearly shows a range of improvements for one or more children.
PARENT better off	Parents are clearly the focus and their circumstances, attention to parenting, and parenting practices improve.
WHĀNAU better off	In this story a family system (including multiple caregivers and children) have improved functioning. A range of child-protective factors are in play.
COMMUNITY better off	This story is about an improvement in a community's readiness to nurture and raise children well. It involves changes in community attitudes as expressed in the media and online and in the way that people organise themselves to support parents and children. It also includes changes in access to services or the mix of services available, and changes to the physical environment affecting parents and children. Community Readiness
OTHER	This 'other' category is for the storyteller to name a story type that we haven't thought of yet.

[Community Readiness](#)

Important characteristics [vulnerabilities]

Individual and whānau characteristics

Parenting problems

These can include parents consistently struggling to manage the behaviour of their children (see [SKIP Tips](#)), and to respond in age-appropriate and nurturing ways. Common signs of a significant problem include parents: shouting at children and rough-handling them, not feeling able or willing to comfort distressed children, feeling regularly angry, stressed, guilty and/or upset in the parenting role. This situation can be compounded by other factors

MEASURING QUALITY AND OUTCOMES

Measuring the quality of implementation or the achievement of goals (outcomes) requires making defensible judgements about the extent of progress relative to some self-imposed standards.

- This means creating *ranked categories* that show levels of change (*scales*), e.g 1-5, AND providing clear criteria that justify the ranking of each category (*rubrics*)
 - There are many common ways that organisations assess programme quality or client outcomes using scales. These are often **not sufficiently evaluative**; they don't define the "good" or "good enough" or indicate what change is needed and why

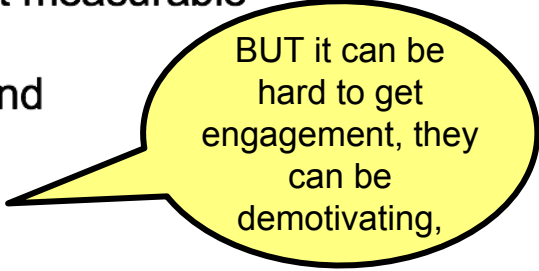

NB. Even “validated” scales or psychometric tests (questionnaires) should be used with caution

The case for using RUBRICS

Rubrics are commonly understood as a kind of score card. At their simplest they include: a rating scale (often 5 levels), specific criteria differentiating each level of achievement, and often a benchmark level indicating a minimum acceptable standard. When used for programme evaluation, rubrics can be very helpful:

- to rate progress against expectations on the most important measurable components of a TOC
- for presenting more general judgements about the extent and direction of change in programme quality and client results.
- as a *sensemaking tool*
 - Indicating progress against baselines and benchmarks
 - drawing on various inputs - qualitative observations, logical reasoning and quantitative measures (e.g. psychometric scores or categorical data like employment status) practitioner understandings, and formal research-based evidence
 - This means rubrics are best *co-created* with key stakeholders, and improved through progressive use. A generic version can be used to start things off.

BUT it can be hard to get engagement, they can be demotivating,

MAKING EXPLICIT EVALUATIVE JUDGEMENTS

Rubrics can be combined with *Goal Attainment Scaling* (and adapted as below) to explicitly rate performance and show progress. Judgements about rating and progress can be supported by referencing explicit criteria and supporting data. Ratings can also be framed various ways.

Rating (1)	1	2	3	4	5	Net gain	Explanation of rating levels and change	
Rating (2)	-2	-1	0	1	2			
Domain 1						1	Data supporting rating	Reference criteria for rating (e.g. Domain1-Rating1)
Domain 2						1		
Domain 3						2		
Domain 4						0		

T.1
T.2
T.3

-2	-1	0	1	2
Very Poor	Poor	Fair/OK	Good	Excellent

1	2	3	4	5
Nascent	Emerging	Developing	Mature	Leading

The Better Evaluation [website](#) and [blog](#) provides various examples of rubrics differing in structure and criteria, and methods for displaying trend data. See also [Goal Attainment Scaling](#) and [Design Abacus](#)

Organisation X & the 'Generator'

Evaluative Monitoring
> whole organisation
> whole system

Organisation X

Changeable evaluation parameters - negotiating intent

- A large complex organisation
- Wanting to **promote development** in a particular strategic area
- No recent strategy – **evaluators co-produced a strategy**
- A re-survey was proposed by the organisation to highlight salient trends and issues
- **Evaluator relitigated intent** - the survey unnecessary (there is enough data)
- Our liaison wanted to evaluate the performance of the organisation against the strategy BUT the strategy had not been formerly released
- A **developmental evaluation** was proposed providing a means to:
 - Socialise the strategy
 - Gather data on organisational barriers to developments in line with the strategy
 - Develop a process/tool for galvanise action across the organisation to advance the objectives and goals of the strategy – instigates cycles of design-action-reflection
 - Any and all progress is in line with the strategy is ‘good’

Organisation X

Circumstances/expectations	Approaches
<ol style="list-style-type: none">1.High complexity2.High local autonomy (expertise is local)3.High innovation4.Formal evidence is not well established5.Sensitivity to initial conditions6.High tolerance of 'failure', some instances may not 'work', learning highly valued7.Attribution is less important / feedback loops provide mostly provide reassurance to policy about evidence of impact in the right direction	<p>Outcome mapping (requires theorising about change)</p> <p>Outcome harvesting</p> <p>Most significant change (MSC)</p>
<p>As above (first 5 points) BUT</p> <ul style="list-style-type: none">●Strategic goals are well described●Goal dimensions can be agreed/set from the outset●Formal expectation of creating positive impact in each site of action, i.e. <u>every incremental development</u> is important●Attribution is reasonably important (e.g. feeding into an impact evaluation) and feedback loops are expected to drive problem-solving and iterative design, including drawing on expertise from elsewhere	<p>Goal-setting + goal attainment</p> <p>Action research</p>

Organisation X – goal-setting & attainment

Narrative summary

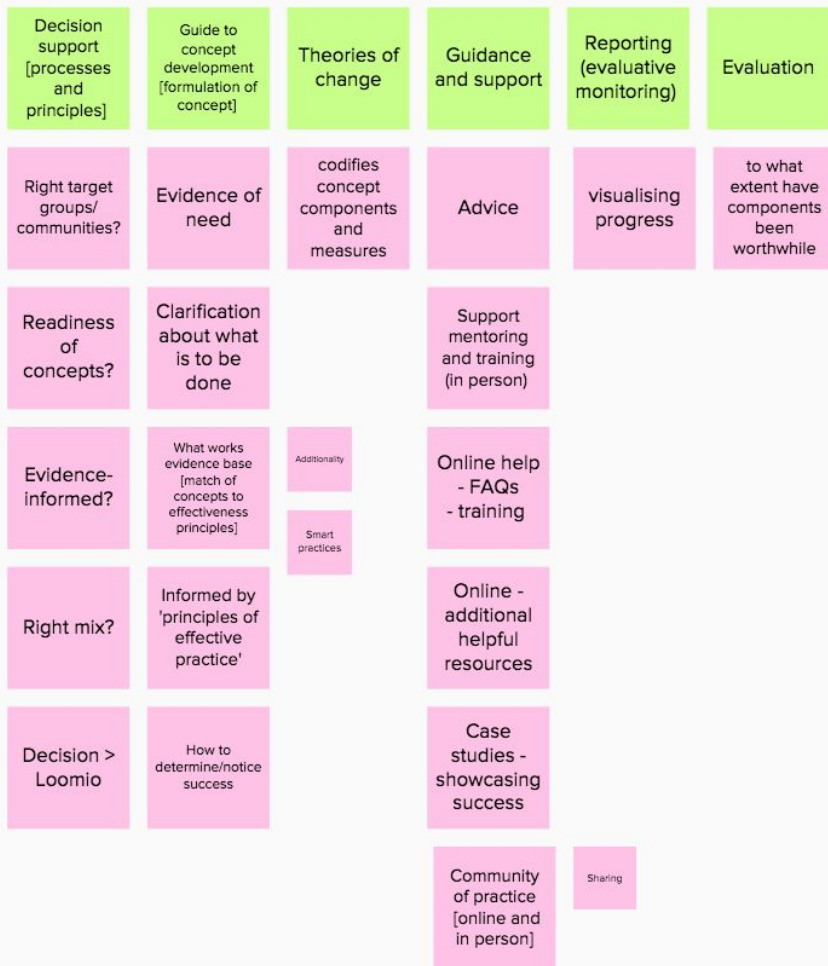

Generator – co-design stage

A co-designed social innovation generating prosperity [alleviating poverty] through community action & enterprise

Evaluator in co-design

1. An evaluation perspective was engaged at the beginning of a co-design process – part of the co-design team
2. Bringing in notion of ‘intended use by intended users’
3. The evaluator proposed and prototyped an intervention design, monitoring and learning platform.

Platform uses

Kia ora - welcome to the Generator Platform

From this page we can take you to the section of the platform that is most likely to meet your needs.

We ask for your email address because this allows you to review the information you have provided as part of a proposal or plan, or to receive progress reports that meet your particular information needs.
